

Vermont Medicaid Program Safeguarding Children's Health

Medicaid Is the Health Care Safety Net for Children.

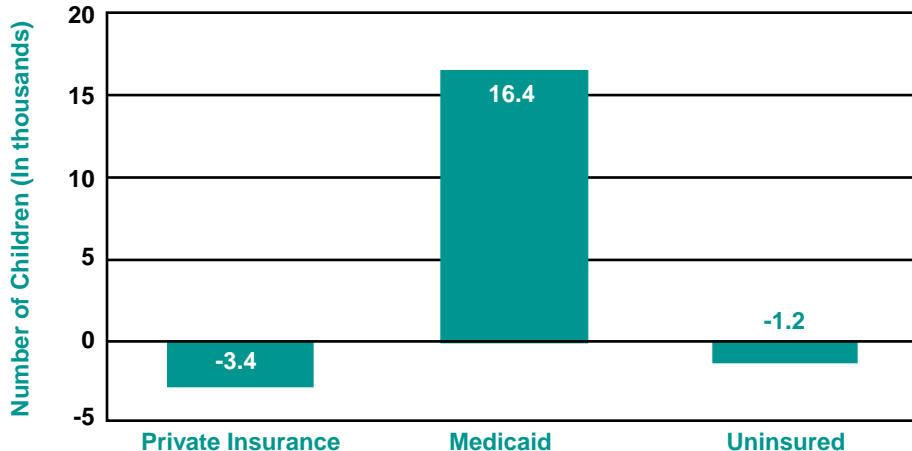

Almost 57,000 children under 21 in Vermont were covered by the Medicaid program in 1994.¹

In 1993, 33% of births in Vermont were paid for by Medicaid.

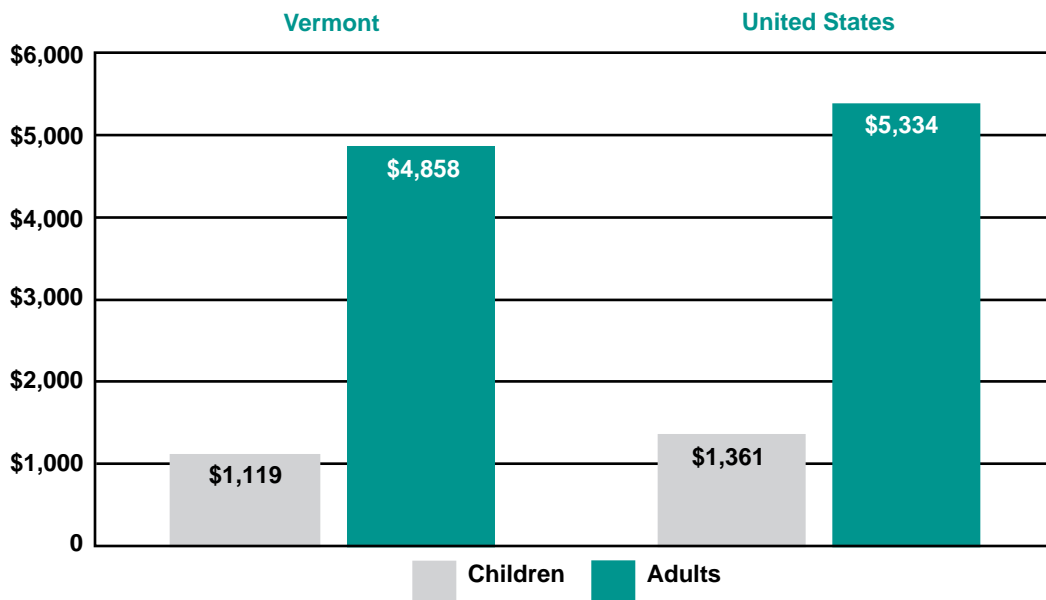

Medicaid Is Even More Important as Private Insurance Coverage Erodes.

Nationally, the majority of children receiving Medicaid live in a household where at least one parent works.²

Change in Health Care Coverage of Children Under 21 in Vermont from 1987 to 1993³

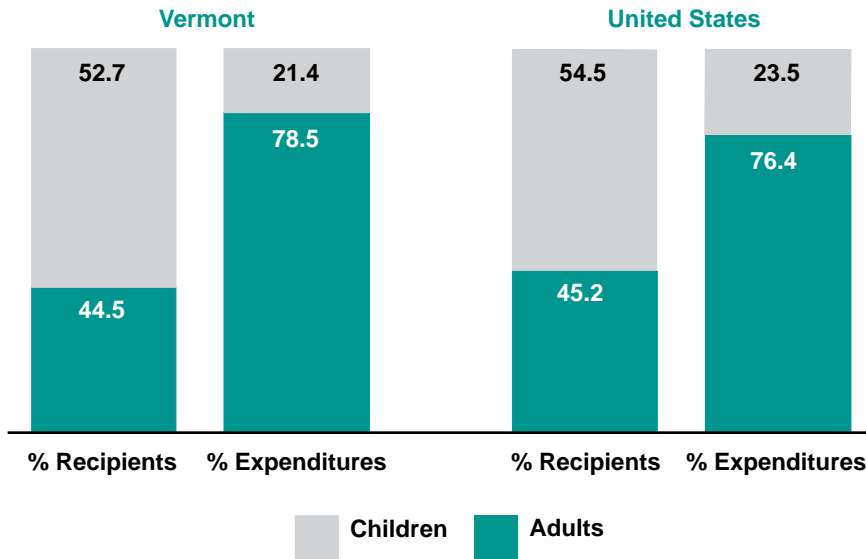

Average Annual Expenditure Per Medicaid Participant in 1994

Providing Health Care to Children Is Not Expensive.

Providing health care to children costs a fraction of what it does for adults. In Vermont, Medicaid can insure four children for less than the cost of one adult.

Medicaid Expenditures for Adults and Children under 21 in 1994*

*(All totals do not add to 100% because age data was not available for some recipients.)

While most Medicaid recipients are children, they account for less than one fourth of all Medicaid expenditures.

The average cost for Medicaid's preventive care program for children, Early and Periodic Screening, Diagnosis and Treatment (EPSDT), is just \$40 a year in Vermont.

Funding Medicaid Is a State and Federal Partnership.

In Vermont over half of the Medicaid program is paid for by the federal government.

In 1994 Vermont received an additional \$10 million from the federal government in disproportionate share (DSH) payments for hospitals serving a high percentage of poor and uninsured patients.

1994 Medicaid Funding* in Vermont

*Does not include disproportionate share (DSH) payments.
