Describe your program quality assurance program:

The Contact Center works with a Quality Assessment and Improvement Schedule benchmarking various aspects of care indicators. The rationale for review of specific indicators may be based on high volume, high risk, high cost, problem prone indicators or any combination of the above. Indicators are scheduled for review anywhere from two to twelve times/year.

Quarterly Quality Assessment and Improvement Summary Reports Indicate the specific monitor and description (including quantitative data) and whether established threshold, external benchmarks, or calculated averages over time are used as markers to determine level of performance.

The TEAM(Think, Establish, Analyze, Make recommendations) Reporting Tool is used to establish new improvement projects and indicators.
