### Introduction

Graduate medical education (GME) is a cornerstone and the lifeblood of military medicine. It provides the basis for a continuing history of innovation and excellence in patient care, education and training, and research, in more traditional medical and surgical specialties and in unique military specialties such as flight surgery and diving medicine. Among the broad spectrum of military medical specialties, pediatrics and pediatricians have played essential roles in providing necessary primary and specialty care to hundreds of thousands of pediatric and adolescent dependents of active duty and retired military personnel. Set apart from their civilian counterparts, however, uniformed services pediatricians practice the science and art of their specialty in every corner of the globe and stand alongside their adult medicine and surgery counterparts in supporting operational forces and unique humanitarian missions. Uniformed services pediatricians have an important place and play an important role in the American Academy of Pediatrics (AAP), with contributions focused in the activities of the Section on Uniformed Services and the Uniformed Services Chapters East and West. This GME catalog is a product of the work of the Executive Committee of the Section on Uniformed Services. It is provided to promote interest in and awareness of the diverse education and training opportunities available to students participating in the Armed Forces Health Professions Scholarship Program, students attending the Uniformed Services University of the Health Sciences, and any other parties with special interests in pediatrics in the uniformed services. Enjoy browsing the catalog. Better yet, use it as a catapult to visits or scheduled rotations at pediatric programs in military medical facilities. Special thanks go to Jackie Burke and Tracey Coletta, staff for the Section on Uniformed Services.

## A Guide to Military Pediatric Residencies

### American Academy of Pediatrics (AAP) Section on Uniformed Services

The Section on Uniformed Services, founded in 1959, is dedicated to educating physicians on topics in pediatrics unique to the uniformed services and to providing a forum for military pediatricians and Public Health Service physicians. In addition, the section consults to the American Academy of Pediatrics (AAP) Board of Directors, on request, on policy and other issues. Membership in the section is open to all Fellows of the AAP (including those in training) in the uniformed services; civilian AAP Fellows appointed by the surgeons general of the Army, Navy, Air Force, or US Public Health Service to act in the capacity of their civilian pediatric consultants; and retired military officers.

The section has more than 800 members. The Section on Uniformed Services hosts an educational program called the Uniformed Services Pediatric Seminar (USPS) at the AAP National Conference & Exhibition. Topics addressed include community pediatrics, management of complex humanitarian emergencies, sports medicine injuries, school health, and bioterrorism. The section works closely with AAP Uniformed Services Chapters East and West, the 2 AAP chapters composed of pediatricians in the uniformed services. In addition, the section works with the surgeon generals' Pediatric Specialty Advisors, the Uniformed Services University of the Health Sciences, and numerous military medical facilities around the country. The section produces a newsletter twice a year featuring updates on section, chapter, and AAP activities. The annual Scientific Awards Competition presents the Ogden Bruton, Howard Johnson, Andrew Margileth, Leo Geppert, and Val Hemming awards to papers in 6 areas.

The section hosts the Ogden Bruton Lectureship and presents the Outstanding Service Award and the Dave Berry Award.

Current goals include providing an educational forum for the discussion of challenges and discoveries related to the global practice of Uniformed Services pediatrics, stimulating research and education in pediatric medicine as encountered in the full practice of Uniformed Services pediatrics and disseminating knowledge about Uniformed Services pediatrics through AAP and other channels to the medical profession at large and respective Surgeons General.

- Pediatric emergency medicine at Mary Bridge Children's Hospital, Tacoma
- Hospitalist rotation at Mary Bridge Children's Hospital, Tacoma
- Pediatric nephrology at Mary Bridge Children's Hospital

### The Setting

Madigan Army Medical Center (MAMC) is a 414-bed medical facility that opened in 1992. MAMC represents state-of-the-art medical care and technology. MAMC has incorporated \$80 million of new technology and medical equipment. Among the highlights are the Medical Diagnostic Imaging Support system for radiology image storing and retrieval with remote terminals throughout the facility, and the Clinical Information and Composite Health Care and AHLTA systems designed to simplify clinical charting for inpatient care, laboratory data retrieval, patient order entry, and email.

MAMC is ideally located just south of Tacoma in the scenic Puget Sound basin of western Washington. Seattle is just 40 miles to the north. Ferries ply the waters of Puget Sound for short excursions or for longer trips up into Canada. The Seattle-Tacoma area provides a wide assortment and unique combination of delectable dining, professional sports, theater, museums, and other cultural activities. Outdoor recreational activities include skiing, hiking, fishing, camping, sailing, and mountain climbing. Glacier capped Mount Rainier is less than 50 miles away. The primary mission of MAMC Department of Pediatrics is to train physicians for future excellence in the care of pediatric patients from birth to 23 years of age. The patient population ensures the widest variety of experience in all clinical settings. The work hard – play hard philosophy of the department promotes lively professional interaction with the residents, who are encouraged to ask questions of their attending staff. The graduating residents are well equipped to serve in their future roles as clinicians, teachers, and leaders in Military medicine.

- Outpatient Pediatrics Pre-Attending Rotation at Malcolm Grow Air Force Medical Center
- Nursery Pre-Attending Rotation at Fort Bragg Womack Army Medical Center, Blanchfield Army Community Hospital or Landstuhl Regional Medical Center

### Philosophy of Collegiality

The National Capital Consortium Pediatric Residency Program is an integration of longstanding residencies at the National Naval Medical Center in Bethesda, MD, and the Walter Reed Army Medical Center in Washington, DC, and is one of the largest pediatric training programs in the military and the only pediatric program training Army, Navy and Air force physicians. We recognize and embrace our residents as our current and future colleagues and appreciate and foster the unique life-long learning needs of each of us.

### Comprehensive Clinical Care

Our department provides primary and subspecialty care to some of the most complex patients in the military health system. Residents are part of a comprehensive and coordinated team that is able to deliver care through multidisciplinary clinics such as the Maternal Fetal Medicine/Perinatal Clinic, Sickle Cell Clinic, Craniofacial Clinic, Spina Bifida Clinic, Lupus Clinic, and the Childhood Cancer Survivors Clinic. Our Primary Care Pediatrics staff has over 200 years of practice experience. Fellowship programs in neonatology, pediatric gastroenterology, hematology/oncology, neurology, endocrinology, and infectious diseases add further depth to the clinical teaching program.

## A Focus on Global Health

The program offers an unparalleled global health curriculum which includes required training at the Military Medical Humanitarian Assistance Course. Residents have rotated in Honduras, Kenya, Ghana, Peru, China, Moldova, Ethiopia, and aboard the USNS Comfort in South America, and cite them as the most influential experiences of their career.

## Commitment to Research & Scholarship

A wealth of mentored research opportunities is available at Walter Reed as well as from the Uniformed Services University of the Health Sciences, the NIH, the Walter Reed Army Institute of Research, and the Naval Medical Research Institute.

Over half of residents present research at national meetings, and a third have a peer-reviewed publication from their residency. Residents regularly are recognized with national resident research awards. Scan the QR code above to see a current list of publications by our faculty and residents.

## The Setting

Washington, DC is culturally & politically stimulating - the local news is the national news. The climate is temperate with four distinct seasons; beaches, mountains, & ski slopes are all within a several hour drive. D.C. is a melting-pot of the country and the world, and excellent cuisine, music, and theater in almost every genre are available in dozens of neighborhoods. Conde Nast Traveler named DC the top food destination in recent years.

For sport enthusiasts, the D.C region boasts professional teams in football, baseball, hockey and soccer, plus scores of opportunities to watch or participate in amateur sports from kayaking to curling to cricket. There are unrivalled cultural activities for all ages, with the Smithsonian Museums and national monuments a short ride away.

D.C. is ranked as among the top 5 walk-friendly, transit-friendly, and bike-friendly cities in the country, and most residents live within 15 minutes of the hospital. Our residents have among the shortest commute times of all military pediatric residents (source: TransitScore) The region also boasts several of the finest school districts in the nation, and great housing options for singles, young couples, and families.

Eligible Pediatric beneficiaries.....	159,000

### Available Pediatric Subspecialties

Adolescent medicine, allergy/immunology, cardiology, Child Psychiatry, developmental/behavioral, dermatology\*, endocrine, gastroenterology, general pediatrics, genetics/dysmorphology, hematology/oncology, infectious diseases, intensive care, neonatology, nephrology\*, neurology, pulmonology, radiology and rheumatology\*; as well as the pediatric surgical subspecialties of general surgery, ophthalmology, otolaryngology, orthopedics and urology.

\*available only at Children’s Hospital of the Kings Daughters (Norfolk).

### Pediatric Program

No. of teaching staff Physicians .....	70
Nurse Practitioners .....	10

### No. of house staff

PL-1 (6 Navy, 6 Air Force) .....	12
PL-2 .....	12
PL-3 .....	12

Numbers of Navy senior residents vary annually depending on the needs of the service.

### Affiliated Institutions

- Uniformed Services University of the Health Sciences (USUHS)
- Children’s Hospital of the King’s Daughters (CHKD)
- Children’s Hospital of Richmond at Virginia Commonwealth University (VCU)
- Langley Air Force Base (LAFB) Hospital

### Rotations Outside the Medical Center

- Two ambulatory months at LAFB
- Multiple subspecialty electives at CHKD possible
- Humanitarian ship missions are emphasized
- Required rotations at CHKD: pediatric emergency medicine and inpatient wards
- Required rotation at VCU : PICU

The Naval Medical Center Portsmouth (NMCP) is located in southeast Virginia on the banks of the Elizabeth River. The historic battleship Wisconsin is in view from the Medical Center, home ported across the river in Norfolk. Virginia Beach is just a short drive to the east. The region, known as Hampton Roads or Tidewater, is the home of the largest concentration of US military in the world. Hampton Roads is the center of the Navy’s Atlantic Fleet, but the Army and Air Force also contribute significantly to the total pediatric population of over 135,000 this large population ensures an excellent clinical learning environment with the highest annual number of newborn deliveries and pediatric clinical encounters in the Department of Defense (DoD). Our graduates are extremely well prepared for their potential duty in isolated stations because they have seen it, done it and taught it!

NMCP is known as the “First and Finest.” It is the oldest major medical facility in the DoD. The historic civil war era hospital (Building One) has been restored to its original luster and serves as the command and administrative suite and houses the 2003 Federal Library of the Year. The main clinical center (Building Two) was opened in 1999. The previous hospital (Building Three) has also been renovated and contains state of the art educational classrooms and auditorium, resident workspaces, eateries, a satellite gym perfect to escape to when call allows and lots of clinical and administrative spaces. It is a pleasure to work in such a beautiful, well-equipped and spacious facility!

We have been training Air Force residents since 2005 and have a significant complement of Air Force faculty, including a Chief Resident, to serve as mentors for your Air Force career.

The entire pediatric staff is committed to providing intense, personalized resident training; superb care to military children; and medical research. A balanced mixture of general pediatrics and tertiary care prepares the pediatric resident for a career as a general military pediatrician and provides a foundation for further training in pediatric subspecialties and academic pediatrics. Over the past 20 years, 98% of graduates from our pediatric residency program have been board certified by the American Board of Pediatrics.

Hampton Roads is one of the most popular vacation spots on the East Coast. The area offers something for everyone. The history buff can enjoy Williamsburg, Yorktown, and Jamestown, all within a 1-hour drive. For sports fans, Hampton Roads boasts minor league baseball and hockey teams, as well as excellent college-level sports. The fine arts are well represented with a symphony, an opera company, multiple theater groups, and a multitude of museums. The area allows for a wide variety of outdoor activities for all seasons.

In the summer, enjoy world-famous beaches or sail on the Chesapeake Bay. In the fall, take a short drive to the Shenandoah Valley to view the changing foliage. In the winter, snow skiing is only 3 hours away by car. In the spring, visit the Norfolk Botanical Gardens. Several cruise lines have recently begun sailing from Norfolk as well. Despite all that Hampton Roads has to offer, it is surprisingly affordable. Housing prices are reasonable, public schools are excellent and there is easy access to a number of military bases with excellent shopping and recreational facilities. For more information, please visit our command Web site ([www-nmcp.med.navy.mil](http://www-nmcp.med.navy.mil)) and follow links to the pediatric department.

### Rotations Outside the Medical Center

- University of California, San Diego
- Rady Children’s Hospital and Health Center
- Children’s Hospital of Orange County

### Overview

The Naval Medical Center pediatric residency program is one of the best in the country. An excellent full-time faculty is dedicated to patient care, teaching, and research. The program is fully accredited by the Pediatric Residency Review Committee with a commendation for demonstrating “substantial compliance with the ACGME’s Program Requirements.”

The Naval Medical Center in San Diego (NMCS D), also known as “Balboa,” is one of the largest and most technologically advanced military treatment facilities in the world. San Diego County is home to the Pacific Fleet and the world’s largest Marine Corps base, Camp Pendleton. Balboa and the Department of Pediatrics are leaders in managed care and resource sharing in the navy. Residents have a strong primary care experience as providers in a medical homeport team. Outpatient pediatrics is taught by a staff of 5 Military and 5 civilian general pediatricians and nearly 20 subspecialists in a group practice setting. More than 67,000 children are eligible for referral to subspecialty and surgical care. In addition, there are 4 intensivists and 4 hospitalists managing a busy inpatient service, and Balboa has the military’s busiest NICU.

The program boasts an active research curriculum for residents with engaged faculty mentors. The medical center has a state-of-the-art medical and surgical simulation center, medical library, as well as telemedicine and teleconferencing facilities. The large and diverse population base, along with the modern facilities provide an academic environment for training that is second to none.

Global health and preparation for humanitarian missions are top priorities for our program. Residents are able to join the USNS Mercy during Pacific Partnership deployments to various locations across the Pacific. At various locations across the Pacific they engage in direct patient care as well as capacity building educational engagements with local health care providers. NMCS D Pediatrics also has a partnership with the Ugandan Military to improve health care services for adolescents with HIV, as well as build on general pediatrics capabilities. Residents can elect to participate in this program and travel to Uganda to take part in collaborative educational projects with their military’s health care team.

Faculty at NMCS D pride themselves on being approachable and dedicated to preparing our next generation of military pediatricians. We welcome our residents at orientation with a “Faculty Bio” package which provides a one page description of each faculty member. The goal is to help interns and residents get to know the staff in a personal way, and foster mentorship relationships.

### The Setting

The Naval Medical Center is located in Balboa Park, the “crown jewel” of San Diego and home to theaters, museums, and the world-famous San Diego Zoo. San Diego boasts one of the world’s best climates with sunshine and temperatures from 70°F to 80°F year-round. Outdoor activities abound and include sailing, surfing, swimming, running, hiking, and biking. NMCS D is located minutes from the beaches and a few hours drive from the mountains, deserts, and ski resorts. A variety of beautiful neighborhoods in different price ranges make San Diego a wonderful place to live, work and raise a family.

**San Antonio Uniformed Services Health Education Consortium (SAUSHEC) Pediatric Residency Program**  
**Integrated Institutions of Brooke Army Medical Center (BACM)**  
**Wilford Hall Ambulatory Surgical Center (WHMC)**  
**C.R. Darnall Army Medical Center (CRDAMC)**  
**Randolph Air Force Base Outpatient Clinic (RAFB)**

**The Setting**

The San Antonio Uniformed Services Health Education Consortium (SAUSHEC) Pediatric Residency is a joint Army and Air Force Residency Training Program and the largest DoD Pediatric Training Program. The Program has capacity for 14 house staff each year (5-6 Army and 8-9 Air Force) and uses 3 primary military training hospitals (BAMC, WHASC, and CRDAMC), 1 military PCMH clinic (Randolph), and 3 affiliated training hospitals (University Hospital, Children’s Hospital of San Antonio, and Methodist Hospital). BAMC and WHASC are located in beautiful San Antonio and are only 14 miles apart. The civilian affiliates are located between the two major military hospitals.

San Antonio, officially "Military City USA", is a bilingual city representing the blending of many cultures. Located in southern Texas, the weather is excellent and the cost of living is low. Though the 7th largest city in the US (pop.1.4 million with over 600,000 children under age 18 years), San Antonio maintains small-town atmosphere and charm while simultaneously providing amenities found only in large metropolitan areas (professional sports (Spurs, SAFC), a renowned zoo and botanical gardens, theme parks (Fiesta Texas, Sea World, Schlitterbahn), theater, symphonies, the ‘world’s largest indoor rodeo’, "Fiesta," and the world-famous River Walk. The beautiful Texas Hill Country offers a myriad of outdoor activities and the beach is only 2 hours away.

**Affiliated Civilian Institutions**

- University of Texas Health Science Center San Antonio: University Hospital (NICU, Inpatient Ward, electives)
- Baylor Health at San Antonio: Children’s Hospital of San Antonio (PICU, Emergency Medicine, electives)
- Methodist Hospital of San Antonio (Anesthesia, electives)

**Available Pediatric Subspecialties**

On site: Academic General Pediatrics; Adolescent; Allergy; Cardiology; Child Abuse; Dentistry; Developmental; Emergency Medicine; Endocrinology; Ear, Nose, and Throat; Gastroenterology; Genetics; Hematology/Oncology; Infectious Diseases; Intensivist; Neonatology; Nephrology; Neurology; Neurosurgery; Ophthalmology; Orthopedics; Psychiatry; Psychology; Pulmonology; Radiology; Surgery; Urology

**Pediatric Program**

No. of teaching staff Physicians .....	90
<b>No. of house staff: 2019-2020</b>	
PL-1 .....	13
PL-2 .....	14
PL-3 .....	16
PL-4 (Chief of Residents).....	2
Fellows .....	6 (Neonatal), 7 (Adolescent)

**Program Demographics:** SAMPC and civilian affiliated institutions (including University of Texas Health Science Center, Children’s Hospital of San Antonio, and Methodist Hospital)

Combined yearly admissions.....	4500
Pediatric intensive care unit (PICU) .....	1500
Neonatal intensive care unit (NICU) .....	950
Deliveries. ....	4500
Outpatient visits.....	81,500

BAMC features a state-of-the-art Trauma Center, Burn Center, Pediatric & Neonatal ICU, and Resident specific office space. Wilford Hall Ambulatory Surgical Center (WHASC) on Lackland AFB has a new facility, recently opened in 2017.

CRDAMC is the third integrated teaching hospital of the SAUSHEC Pediatric Residency. It is located on Ft Hood, TX, 140 miles north of San Antonio. C.R Darnall Army Medical Center is the largest Army post in the world. CRDAMC performs more than 1,800 deliveries a year and 150,000 pediatric clinic visits a year with a faculty of 10 Army and 4 to 6 civilian pediatricians. The resident rotations at CRDAMC are designed with resident autonomy in mind to better prepare our graduates for the environment in which most of them will practice after completion of training.

Randolph Air Force Base is a large outpatient PCMH clinic model that helps upper-level residents better prepare for life as a primary care provider, away from a major medical center. Residents carry a full pediatric clinic schedule and practice use of a PCMH team to improve efficiency and skills in an outpatient setting as they approach graduation and anticipated military pediatric careers.

SAUSHEC is the location of a tri-service adolescent fellowship, neonatology fellowship, and is the military's only Extracorporeal Membrane Oxygenation (ECMO) Center. It also houses the hub of the Air Force Pediatric CCAT team, managed by many of our own pediatric critical care faculty. Our residents and subspecialists care for local and military children referred from Air Force and Army bases in Louisiana, Oklahoma and worldwide ECMO transports. Patients at many outlying military community hospitals are co-managed by their local military pediatricians and by SAUSHEC faculty and residents, providing our residents excellent teaching cases for GME from a broad geographic region. Our residents gain a valuable perspective of caring for children with special disabilities by rotating at the summer camp run by the Children’s Association for Maximum Potential (Camp C.A.M.P.), Camp

Independence (a Type 1 Diabetes Camp), and Camp Discovery (a pediatric Dermatology camp).

The program uniquely prepares graduating residents for military pediatric careers in setting aside one month at the end of training for a concentrated focus on military medicine, the business of medicine, board review, managing a military pediatric clinic, and deployment/ humanitarian/international medicine review called the June Transition to Practice (JTTP). All of our residents gain deployment training as well as course work in providing Humanitarian Assistance followed by a training experience in providing care in austere environments. Additionally, given the size of our program and responsiveness, flexibility and individualization of resident training is a cornerstone trait.

The combination of the Army and Air Force pediatric faculty of the BAMC, WHASC, Randolph, and CRDAMC military hospitals/clinics ensures that the program has multiple faculties in nearly all pediatric medical and surgical subspecialties and professional experience in both Army and Air Force medicine and officership. The dedication to teaching and focus on education from our experienced faculty and program is routinely rated as the #1 strength of our training program by the SAUSHEC Pediatric Residents. Our close partnerships with local civilian training platforms and hospitals ensure a wide breadth of training, including diagnoses less commonly seen in military treatment facilities and guarantee our residents a large and diverse patient population to learn from and to care for.

The combination of an outstanding faculty; excellent source of patients; modern, state-of-the-art facilities; close university ties; and desirable location makes a SAUSHEC the premier pediatric residency in the nation!

### Affiliated Institutions

- John A. Burns School of Medicine, University of Hawaii
- Kapiolani Hospital for Women and Children, Honolulu, HI
- Uniformed Services University

### Rotations Outside the Medical Center

- Pediatric inpatient ward at Kapiolani (PL-1)
- Pediatric PICU at Kapiolani (PL-2)
- Pediatric ER at Kapiolani (PL-3)

### Overview

Pediatric residency training began at Tripler Army Medical Center over 40 years ago with COL Ogden Bruton as the Program Director. Since that time, over 300 pediatricians have been trained at Tripler. We fully embrace the Hawaiian concept of *ohana* (family) and our residents work closely with teaching faculty, nurses, and ancillary staff across the inpatient and outpatient settings. Tripler residents benefit from a large referral base as we are the referral center for the entire Pacific region, encompassing Japan, Korea, Guam, and all of the Hawaiian Islands. Trainees also have the chance to care for children from remote islands with unusual tropical diseases through the Pacific Island Health Care Project. Other unique aspects of our program include participation in medical transports, international travel options, and rotations at our local Children's hospital. Overall, Tripler Pediatrics provides challenging, comprehensive training that prepares graduates for future success as pediatricians and military officers.

### The Setting

Tripler Army Medical Center, a Honolulu landmark overlooking Diamond Head and Waikiki Beach, is the only military medical center in the Pacific. The facility serves all Uniformed Service members on the island as well as 350,000 eligible Pacific Islanders. The referral base is three million square miles of ocean and 700,000 square miles of land across the Pacific Basin. Tripler is truly "pediatrics in paradise." World-famous beaches and surf sports are only minutes away. Honolulu, a busy metropolis of over one million people, is also a short drive away and boasts theater, a symphony, opera, major sporting events, a university, and a range of restaurants and resorts. The island of Oahu is host to many facilities for the military family, all available year-round due to the tropical Hawaiian climate: Hickam Air Force Base, Kaneohe Bay Marine Barracks, Schofield Army Base, Fort Shafter, and Pearl Harbor. In addition, military families have exclusive use of many military amenities from the Hale Koa Resort in Waikiki, camping and private beach access at Bellows and Barbers Point, cabins in Volcanoes National Park on the Big Island of Hawaii, and cabins on Barking Sands Missile Range on Kauai. Family housing is available on Tripler as well as in nearby Aliamanu Military Reservation and on Fort Shafter with incoming housestaff given priority when possible. Public schools are good, and a range of private schools are also available.

#### Affiliated Institutions

- Wright State University
- Miami Valley Hospital (MVH)

#### Rotations Outside the Medical Center

We offer the only fully integrated, free-standing children's hospital training platform in Department of Defense GME. Dayton Children's is a 155-bed hospital that provides over 29,500 patient days per year. Beginning in 1978, WSU and DCH integrated its pediatric residency programs with WPAFB. The integrated program experience allows trainees not only significant case volume, but also the opportunity to treat a variety of rare and complex pediatric diagnoses across more than 35 pediatric subspecialties. As 1 of only 46 freestanding Children's Hospitals in the US our faculty and facilities remain unmatched in the DoD. Residents may also elect to do an away rotation at select teaching hospitals in the Dayton, Columbus and Cincinnati area. In 2017, Dayton Children's Hospital opened a new 260,000 sq. ft. 8 –story patient care tower.

#### The Setting

#### IN 2014, AN AIR FORCE TIMES POLL OF READERS NAMED WPAFB AS THE #1 BASE IN THE AIR FORCE

We are located within the Dayton-Cincinnati metro area with a combined population of approximately 3.1 million residents. This metropolitan area provides diverse recreational opportunities including the performing arts, historical sites, restaurants, museums, athletics and parks. Five Rivers Metro Park system in the Dayton area offers more than 300 miles of paved trails, the largest in the nation. Millions of people visit the area each year to enjoy more than 100 local festivals, the US Air and Trade Show and the National Museum of the USAF. King's Island and Cedar Point Amusement parks are within a few hours' drive from Dayton. Numerous academic facilities are located in the area including the University of Dayton, WSU, Xavier University and the University of Cincinnati. Professional sports abound including the Dayton Dragons, the Cincinnati Reds, Cincinnati Bengals and the Columbus Blue Jackets hockey team, all of whom play within a 60-minute drive of the base. The surrounding neighborhoods offer quality affordable homes for rent or sale. There is family housing available on base, with an average wait time of 3 months.

Questions concerning on-base housing should be made to the Housing Referral Office at 937/257-6547 or via this link <http://www.housing.af.mil/wright-patterson/index.asp>
