COURSE DESCRIPTION

The Pediatric Musculoskeletal Medicine Course is a collaboration of orthopedics, rheumatology, and sports medicine that will educate the attendee on how to be better prepared to assess and diagnose musculoskeletal disorders. A good physical examination is key to appropriate diagnosis and referral to a specialist in a timely manner that will result in improved patient care. The course topics will include practical approaches to musculoskeletal issues ranging from DDH screening and clubfoot management to joint pain, common fractures, and overuse injuries. Participants will discuss approaches to the child with proximal muscle weakness, bone and joint infections, and musculoskeletal manifestations of child abuse. Through session debates, participants will consider pros and cons of scoliosis screening in schools as well as ACL surgery for a young athlete.

LEARNING OBJECTIVES

By attending the Pediatric Musculoskeletal Medicine Course you will:

- Understand the importance of performing a screening musculoskeletal examination as part of a normal well child physical.
- Identify common abnormalities in the screening musculoskeletal examination.
- Know when and to what subspecialty a child should be referred.
- Be able to perform the various components of the pGALS (pediatric gait, arms, legs, and spine) screening examination.
- Generate a differential diagnosis for limping in infants, toddlers, children, and adolescents.

Limited availability reserve your spot today!

Cancellations

Course cancellations must be received by June 19th to receive a refund. An administrative charge of $50 will be deducted. Cancellations made after July 12th will not receive a refund.
